

New ! A breakthrough in mRNA Sequencing using HiSeq4000

High Quality of Service and Amazing Prices

mRNASeq

from 250 € / sample *

The French Lille Equipex LIGAN-PM platform, headed by Philippe Froguel, an academic world leader in human genetics, has established a groundbreaking offer for cost effective mRNAseq.

The offer combines Truseq Stranded mRNA libraries (Illumina) on HiSeq 4000, Illumina, with automated sample preparation on Starlet (Hamilton), data analysis and bioinformatics assistance.

- Assistance for project design and project management by our multidisciplinary genomics team
- Automated library preparation (Truseq Stranded mRNA)
- NGS on Illumina NextSeq500 or HiSeq4000
- Customized Bioinformatics Analysis : data delivery via downloading – FastQ - QC

*mRNAseq SR50 – 15 million reads for each library: 250 euros / sample with batch of 160 samples
For smallest batches / other sequencing design (e.g. 50 million reads) please contact us

Our equipments are available also for sequencing ready to load projects
